[Investigation to improve the survival of patients with bronchial carcinomas "radically operated" (author's transl)]

[Article in German]

Salzer G.

The conservative postoperative treatment of patients with successfully resected bronchial carcinoma is described. The drug employed was ISCADOR, deriving from mistle. A comparison is made between 37 treated and 41 untreated cases. After 3 to 5 years 22 of group one and only 9 of group two (controls) are still alive.
